

Services & Hosting

HomeRider collects, processes and hosts your data in a highly secured environment

- Data collection by IP transit service providing guaranteed band width
- Servers – dedicated or shared, totally redundant and protected (Linux, Oracle)
- Hosted in a highly secured Net Centre guaranteeing compliance with the most stringent norms,
- Operation 24 / 24, 7 / 7
- Technical assistance and consultancy services
- Tailor made services
- Development of dedicated applications

The software development resource for the HomeRider® group is totally engaged in new technologies; its first role beings to manage the operation of the HomeRider servers. This highly experienced team with 8 years service at the heart of the group, provides services ranging from simple assistance, hosting, technical support, training, to help with deployment, putting its servers (shared or dedicated) and operations personnel at the disposal of its customers.

The HomeRider servers, used by utilities, municipalities and petrol groups, are installed in a highly secured «data centre», the LDCOM Net Centre in Lyon, a major node for large network operators. These servers benefit from an unlimited band width of high quality at very competitive prices, as well as great evolutionary flexibility. This results in the following advantages for the customers:

- Security and reliability for equipment and data: uninterrupted power supply, duplicated energy supplies, air conditioned environment.
- Security for building and room: fire protection systems, water detection/anti flooding sys-

tems, anti-intrusion (exterior and interior), video surveillance, individual control of people entering and exiting the building.

- Analysis of all upstream traffic by a shared firewall, installed, operated and maintained by HomeRider.
- Guaranteed service quality: HomeRider guarantees contractually the quality of its service and the confidentiality of its customers' data.
- Technical assistance available 24 / 24 in order to respond to emergencies.
- Know how: HomeRider hosts applications and machines for customers from all horizons and sizes, from a local web agency to large national or international groups, in fields as diverse as energy, logistics, retailing, or software development.

HomeRider will manage on your behalf: the technical choice and purchase of your servers, their installation, the maintenance of equipment and software, the evolution and upgrading of systems, security, system monitoring and the supply of licences.
