

Nemo – the customer Web site for the management of the HomeRider AMR System for the water and gas industry

Meter data available from any Internet point...

- Current index
- Hourly index
- Hourly consumption
- Inactive period (none, present, past)
- Maximum debit by period,
- Minimum debit by period
- Consumption histogram
- Power alarm
- Fraud alarm (none, present, past)
- Complementary information for water industry
 - ◆ Continuous debit – State of permanent flow
 - ◆ Back flow alarm (none, present,

Data from the meters is stocked and archived on the fully backed up and protected HomeRider servers. The information is available online, on a personalised site, from any Internet point for any user with the correct password and appropriate levels of authorisation. The information is presented in graphic form and can be printed. Nemo also allows data to be exported to the customer's computer systems for invoicing and special operations.

There is no need for resident software or software development for the customer's systems. This reduces interference with other applications and considerably reduces costs and de-

ployment delays. Use of the site is simple and user friendly. A sophisticated access system makes it possible to give limited access to end users if required. Alerts for abnormal conditions are sent by e mail or SMS to identified recipients.

HomeRider Systems can also format the data in order to export it «raw» to the customer's back office system. In this case it is the responsibility of the customer to manage and protect the data as is required. HomeRider Systems can adapt to any file type and transfer data at the frequency required depending only upon the contract between HomeRider Systems and the customer.
